

House Numbers

General Considerations

House numbers should complement the architectural style of the house. House numbers within a project or street should be compatible in design and located to be clearly visible.

Generally, no application is required for house numbers that are similar in style, size, and color as the original builder numbers.

The installation of house/unit numbers in **attached housing** and **multifamily housing** shall be in accordance with the approved project standards established by the builder.

Specific Guidelines

- House/unit numbers should be located immediately adjacent to a front entrance or door. Numbers should also be placed on a curbside mailbox, where applicable.
- House numbers should be located near or under a light for nighttime visibility. Internally lit numbers are not appropriate.
- House numbers must be legible, Arabic numerals, no taller than 6" and should contrast with the color of the background to which attached.
- Custom designed house numbers may be approved if they are simple, appropriate and relate to the architecture of the house.

Submission Requirements

- Signed and dated application form.
- Description of the project.
- A photograph or drawing of the house numbers, including dimensions, material, and color.
- A drawing or photograph showing the location of the numbers in relation to a front entrance.
