

## **VDOT RESEALING PROJECT SPRING-SUMMER 2020**

To find out the locations of VDOT's resealing project in the Broadlands/Brambleton area, please refer to the green highlighted areas in [this map](#). Please note that in order for VDOT to perform the work, all pavement markings must be removed before the sealant can be applied, as it does not bond properly with markings still on the asphalt. Temporary markings are placed in certain locations during the road work, but not at all locations. After the sealant is applied, there is a curing process that must finish before permanent markings are placed on the road's surface. Per VDOT, this project will continue for a period of time and is weather dependent, but once it is complete all the crosswalks will be in much better condition than they were before.

Questions? Please contact VDOT at
